Saint Louis, Missouri • (636) 577-1601 • gleason.tech • seanie@gleason.tech

SUMMARY

Strategic Senior Software Engineer and Architect with a proven track record of engineering high-scale, mission-critical distributed systems. Expert in crafting resilient microservice architectures, leading platform engineering initiatives, and leveraging AI-driven automation to enhance development velocity. Focused on architectural integrity, technical leadership, and delivering measurable business value through robust technical solutions.

CORE COMPETENCIES

- Architectures: Microservices, Distributed Systems, Event-Driven Architecture (EDA), Cloud-Native
- Languages & Frameworks: Java (Expert), Spring Framework (Boot, Cloud, Security, Data), Kotlin
- Cloud & Infrastructure: AWS, Google Cloud Platform (GCP), Kubernetes, Docker, Terraform (IaC)
- Messaging & Data: Kafka, GCP Pub/Sub, MongoDB, Cassandra, SQL
- DevOps & Platform: CI/CD (GitHub Actions, Jenkins), Gradle/Maven Plugin Development, Platform Engineering
- AI & Automation: LLM-driven Code Generation, Automated Migration Frameworks, Custom AI Skills

PROFESSIONAL EXPERIENCE

NISC - Lake Saint Louis, MO

March 2021 – Present

Senior Software Engineer / Architect

- Lead the architectural design and implementation of a core Java application framework, utilizing Spring Boot's Inversion of Control (IoC) and dependency injection patterns to standardize microservices for a 300+ person engineering organization.
- Enhanced developer productivity by developing custom AI-driven automation (Claude/LLM skills) for seamless Spring Boot upgrades and boilerplate application generation, significantly reducing manual migration effort.
- Developed a high-performance CI/CD ecosystem on Kubernetes, utilizing ephemeral environments for comprehensive integration testing to ensure architectural compliance and reliable deployments.
- Created sophisticated custom Gradle plugins to institutionalize quality gates, automating contract, mutation, and integration testing across the entire CI/CD pipeline.

Perficient Inc. - Saint Louis, MO

April 2019 – March 2021

Lead Technical Consultant

- Directed cross-functional teams in the delivery of complex microservice architectures for a major pharmaceutical distributor, leveraging Spring Boot and Kafka on Pivotal Cloud Foundry to handle high data throughput.
- Developed proprietary Spring Boot Starters that improved development velocity by 20%, eliminating redundant setup tasks and standardizing common enterprise patterns.
- Managed large-scale legacy-to-cloud migrations and version upgrades, ensuring modern security, performance, and scalability standards were consistently met.

- Designed and implemented efficient Kafka messaging patterns that facilitated rapid feature development and improved system decoupling.

Graybar Electric - Maryland Heights, MO

June 2015 - April 2019

Lead Software Engineer (2018 – 2019)

- Developed a multi-cloud data synchronization strategy using Spring Cloud Dataflow and GCP Pub/Sub, bridging on-premise and cloud ecosystems for reliable data mobility.
- Built cloud-agnostic deployment pipelines using Spring Cloud Pipelines, enabling consistent and reliable deployments across diverse Cloud Foundry Foundations.

Web Developer (2015 – 2018)

- Developed high-revenue E-Commerce integrations, specifically the Punchout framework for IBM E-Commerce, which generates a significant portion of the company's online revenue.
- Modernized the E-Commerce landscape by transitioning monolithic systems into scalable Spring Boot microservices on Pivotal Cloud Foundry.
- Implemented high-performance checkout flows and SEO frameworks that directly contributed to increased conversion rates during a major B2C/B2B site relaunch.

EDUCATION

Bachelor of Science - Computer Science

May 2013

Lindenwood University - St. Charles, MO
